

Laasya Sri Boddu

Hyderabad, Telangana · +91-9003330351 · laasya041105@gmail.com · LinkedIn · GitHub

Summary

Cybersecurity undergraduate with hands-on expertise in cryptography, network security, and deep learning-based threat detection. ISC² and Google certified with demonstrated ability to design secure systems and identify vulnerabilities.

Education

Bachelor of Technology in Cybersecurity

Jawaharlal Nehru Technological University – UCESTH, Hyderabad
Current CGPA: 8.9

2023–Present

Projects & Experience

Deep-Learning Based Detection and Decryption of Stego-Images — [GitHub](#) 2026

- Designed and implemented a steganography system using DWT for **secure data embedding** with AES encryption for **confidentiality**.
- Trained a CNN to detect stego-images with **95%+ accuracy** by learning subtle patterns in frequency-domain coefficients.
- **Tech Stack:** Python, TensorFlow, OpenCV, PyWavelets

Morse Code Cryptographer – PWA Application — [GitHub](#) 2025

- Built a **PWA for offline** morse code ↔ text conversion with full functionality .
- Implemented security features: client-side encryption and input validation to **prevent XSS and injection attacks**.
- Achieved **100% offline functionality** using Service Workers and local storage.
- **Tech Stack:** HTML5, CSS3, JavaScript, PWA APIs

Technical Skills

- **Programming Languages:** Python, Java, C, C++, SQL
- **Web Technologies:** HTML, CSS, JavaScript, React, PWA
- **Security Tools:** Wireshark, Nmap, Burp Suite, Ettercap, openssl, tor, snort
- **Forensic Tools:** KgSensor, dumpzilla, FTK Imager, Procmon, Autopsy, Network Miner
- **Cryptography & Frameworks:** AES, DWT, NIST, ISO 27001
- **Operating Systems:** Linux (Ubuntu, Kali Linux), Windows

Certifications

- Certified in Cybersecurity — [ISC²](#) 2026
- **Google Cybersecurity Professional Certificate** — [Coursera](#) 2025
- Introduction to Cyber Security — [Cisco](#) 2025
- Python Certification — [HackerRank](#) 2024
- Problem Solving Certification — [NPTEL](#) 2024

Achievements

- Performed DNS Cache Poisoning using MITM attack, Proxy chains.
- Performed Browser History analysis, Registry analysis.
- Build a basic NIDS using snort & Set a Honeypot.
- Captured 200+ flags across multiple platforms like PicoCTF, OvertheWire, THM, HTB.
